**GLOCK 34 Gen5 MOS**
- NEW SLIDE STOP LEVER
- NEW MAGAZINE (01, ORANGE)
- ENLARGED REVERSIBLE MAGAZINE CATCH
- REMOVAL OF THE FINGER GROOVES

GLOCK 26 Gen5 and GLOCK 34 Gen5 MOS feature the nDLC finish, which is exclusive to the GLOCK Gen5 models. It increases protection against corrosion and scratching and improves the ability of the pistol to function in degreased or adverse conditions. The nDLC finish is present on the barrel crown, no finger grooves, ambidextrous slide stop lever, and the reversible magazine catch.

In addition to the nDLC finish, the GLOCK Gen5 models also feature some of the proven Gen4 advantages, such as:
- RTF ROUGH TEXTURED FRAME
- MODULAR BACKSTRAP AND BEAVERTAIL SYSTEM
- RTF ROUGH TEXTURED FRAME
- MODULAR BACKSTRAP AND BEAVERTAIL SYSTEM

The G19X was developed for the military and is a practical everyday pistol that will do what the user needs it to do; every time, in every condition. Through rigorous testing, the G19X stands up against the elements. The pistol includes self luminous* rear and front sights (*alternatively luminescent sights depending on national laws and regulations) and is resistant to being deeply immersed in water. The slide coating prevents corrosion, resists chemicals, and prevents the slide from sticking. The slide stop lever is extended to an ambidextrous slides stop lever.

The GLOCK G19X combines the best features of two of the most popular GLOCK pistols: the GLOCK 17 and GLOCK 19. These pistols are often used by law enforcement agencies around the world for their accuracy and ultimate reliability. The G19X is no exception.

*GLOCK’s Safe Action® System

GLOCK’s Safe Action® System makes having a handgun safe and easy. This three automatic independently operating mechanical safeguard is designed to protect the operator from any kind of accidental discharge. The operation of the Safe Action® System is quite simple: the trigger cannot be pulled unless the manual safeties are in the safe position, the slide cannot be released unless the manual safeties are in the safe position, and the pistol cannot be fired unless the slide is fully closed and the magazine catch is properly engaged.
